

Environmentally friendly, individual and ideally suited for your project

Every soil is different, and because of that, we manufacture **customized** pile-driven sections that are **environmentally friendly and ideally suited for your project**. Our development department and our structural engineers guarantee maximum reliability. Depending on the project, the heads and boreholes of the sections are adapted and implemented. Be it round, angular or elongated boreholes, these are variable in shape and size and can be cut out with the aid of state-of-the-art laser technology.

... Simple installation with conventional ramming profiles!

Below you'll find an excerpt of the profiles that we manufacture:

The advantages at a glance

- Very effective for lighter loads and well-bearing soils
- Simple installation by pile driving
- Cost savings through efficiency
- Environmentally friendly
- Individual adaptation to a wide variety of soil conditions
- Wide variety of types of ramming profiles

*Our round pipes are designed as full displacement piles
